

Danone's individual commitments to act4nature international

We believe that a healthy diet must come from a healthy planet, a conviction embodied in our company motto: «One Planet. One Health». Biodiversity plays a key role in how we will feed future generations through responsible agriculture. Protecting global biodiversity is a cross-cutting objective that encompasses our following commitments:

1 Zero deforestation by the end of 2020

Since 2012, Danone has been committed to eliminating deforestation from its supply chain activities by the end of 2020, and publishes its **progress** on an annual basis.

Our commitments:

- Zero deforestation in our supply chain by the end of 2020 for our 4 main raw materials.
- 100% **certified RSPO** and **segregated** (traceable from the plantation) palm oil by the end of 2020 for all of the categories of products we offer.
- 100% of our paper packaging made of recycled or FSC-certified (or equivalent) paper by the end of 2020. To find out more about all of our commitments on packaging circularity, please refer to our **policy**.

2 Promotion of regenerative agriculture practices in favor of animal and plant biodiversity

Together with our farmers and other partners, Danone promotes **agricultural practices that are favorable to biodiversity**, such as crop rotation, the development of buffer zones, agroforestry practices, and the limited use of chemical products.

Our commitments:

- In France, 100% of our ingredients produced on the territory will result from **regenerative agriculture** by 2025.
- Throughout our supply chain, **optimize our use of fertilizers**¹ and reduce **chemical inputs**² for 75% of our volumes of milk, fruits, almonds and soy by 2030.

3 Preservation of watersheds

In order to preserve biodiversity in the areas at the greatest risk of water stress, we support locally **adapted solutions** around water quality, quantity and accessibility in our own operations and value chain.

Our commitments:

- Reduce the volume of our total water consumption by 25% by 2030.
- Develop preservation plans for 55 watersheds in our water-stressed areas by 2030.

4 Fight against climate change

We believe that in order to preserve biodiversity, it is essential to reduce our carbon footprint throughout our value chain, and, as agriculture accounts for 60% of our emissions, to work with our farmer partners to sequester more carbon in the soils where we operate.

Our emission reduction targets by 2030 have been approved by the Science-Based Targets initiative based on 2°C in 2017. In 2019, we reached our emissions peak, 5 years ahead of our target.

Among our commitments:

- **Carbon neutrality by 2050** across our entire value chain, from upstream agriculture to the end-of-life of our products.
- Signing the **Business Ambition for 1.5°C** commitment in July 2019.

5 Collective action

We know that we will not be able to solve this problem alone. That is why we signed the Act4nature commitments in 2018 and are recommitting to maintaining them in 2020. It is in the same spirit that we launched the coalition «One Planet Business for Biodiversity» (**OP2B**), an «action tank» bringing together 21 major companies that share the same ambition to make agriculture a lever for the protection and restoration of biodiversity, whether wild or cultivated. Together, they have committed to transforming their own supply chain around three main lines of work: accelerating the deployment of regenerative farming practices, boosting cultivated biodiversity through the diversification of our product portfolios, and protecting and restoring natural ecosystems by eradicating deforestation.
